

# Using the NEW PressReader at NLA

Last updated 20 Sep 2016 11am

1. Login to the eResources section of the NLA website.
2. Select “Licenced Resources” and go to “P”.
3. Select PressReader (usually the 2<sup>nd</sup> item) and accept the next two screens as before.
4. The screen now looks something like this:

5. At the top left, there is an icon made up of three horizontal grey bars. Click on it.
6. A menu will open on the left of the screen. Click the “Publications” item.
7. Select “Australia”, then the state you want.
8. The publications for each state appear to be in random order – if you can see a sequence, please share it! Hunt around for the one you want and click on the icon. The screen then looks something like this:

9. Ignore the bit which says “Open this issue in PressReader App” (if you do go down this path, expect to come out with a depleted wallet and the feeling that you are ready for the funny farm!)
10. Use the page links along the bottom to locate the section you want. Clicking on a page will enlarge it so indexing is easy; sometimes two clicks are required.
11. To change papers, use the back arrow (next to the three grey bars icon) to move back up the chain.

Note:

On the front page, there is a section (bottom left) called “Download the App”. I did this (downloading the windows version) but I have no idea whether this is necessary or not. I suspect not, because I could get into the papers before I downloaded it, but if you run into strife, it probably doesn’t do any harm to download it.

## Printing and Emailing

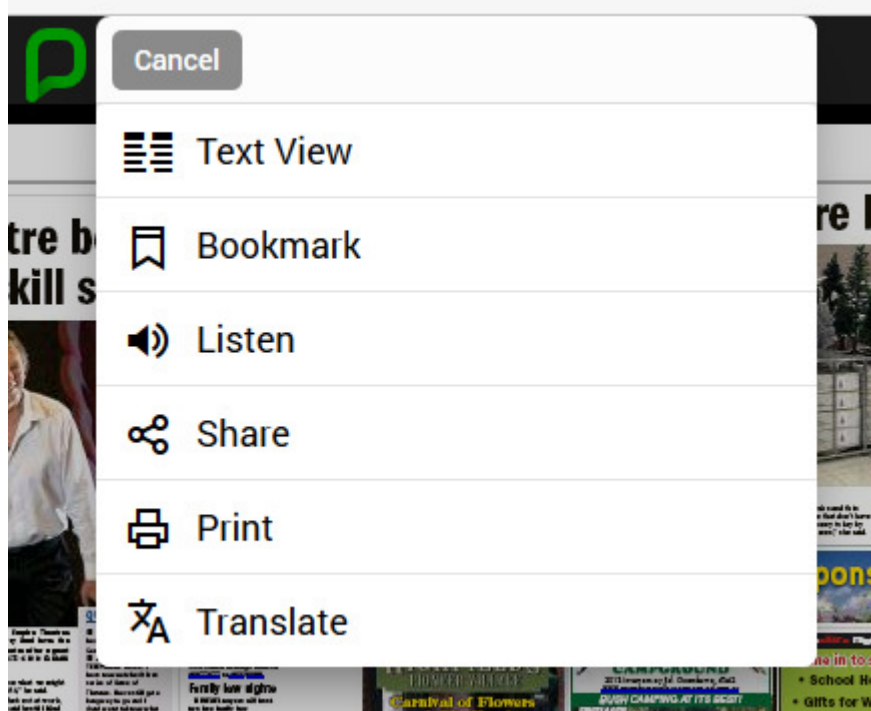

This part of PressReader has regressed by about two decades compared to what we had before.

At this stage, we can’t download a page because none of the Australian libraries are included in the list of “allowable” libraries. I spoke to very helpful lady at NLA this morning, and she said they are investigating how to get this to work – I am the first person to point out the problem.

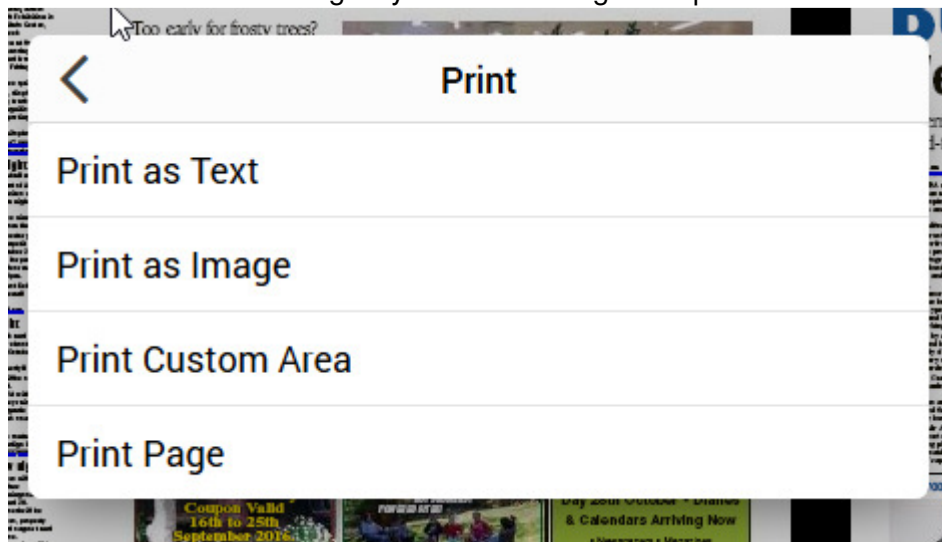

Printing can be done, but in a much more clumsy manner than before.

To print a single page,

1. Right-click on the page you want. You should see a menu like this:

2. Click on "Print". This will give you the following four options:

- 3.
4. I found the Text and Image options useless. Text did nothing, while Image only printed the particular area of the column where the mouse was positioned. This might be of use if you only have a single notice, or you want to capture individual notices.
5. Custom Area allows you to highlight a specific part of the page and print it. This will work if all the notices you want are concentrated in a small area no larger than A4, as you can use "scale to fit" to put this area onto an A4 page so that it is legible.

6. The best method I found was the Page option, but this does require some extra (free) software. I have a program called CutePDF (google it) which, when installed, acts as a “printer” to create a .pdf file. Using this, I can print the whole page, then zoom the resulting .pdf file as much as I need. This is my suggested method.
